

# INRIX Overview

Bryan Mistele  
President & CEO

Beyond Oil: Mobility Hubs  
October 23, 2009

# Traffic Congestion's Effects on Society

- More cars are on the road than ever before
- Traffic is significantly hampering economic activity
- CO2 emissions continue to rapidly rise
- Negatively impacting quality of life

## Traffic Congestion Wastes:

- Time
- Money
- Billions of Litres of Petrol

# Two Paths to Solving Traffic Congestion

## *Traditional (Government)*

Top-down through policies & legislation

- Build massive new infrastructure
- Investments in buses, subways, trains & other public transport
- Road congestion pricing
- Hybrid and alternative energy engine technologies

→ *Are these technologies and policies enough?*

## *New (Empower Individuals)*

The “Democratization” of Traffic & Travel Information

- Better traffic information to consumers in a timely manner
- Social traffic networks
- Traffic-influenced routing
- Collaborative & predictive routing

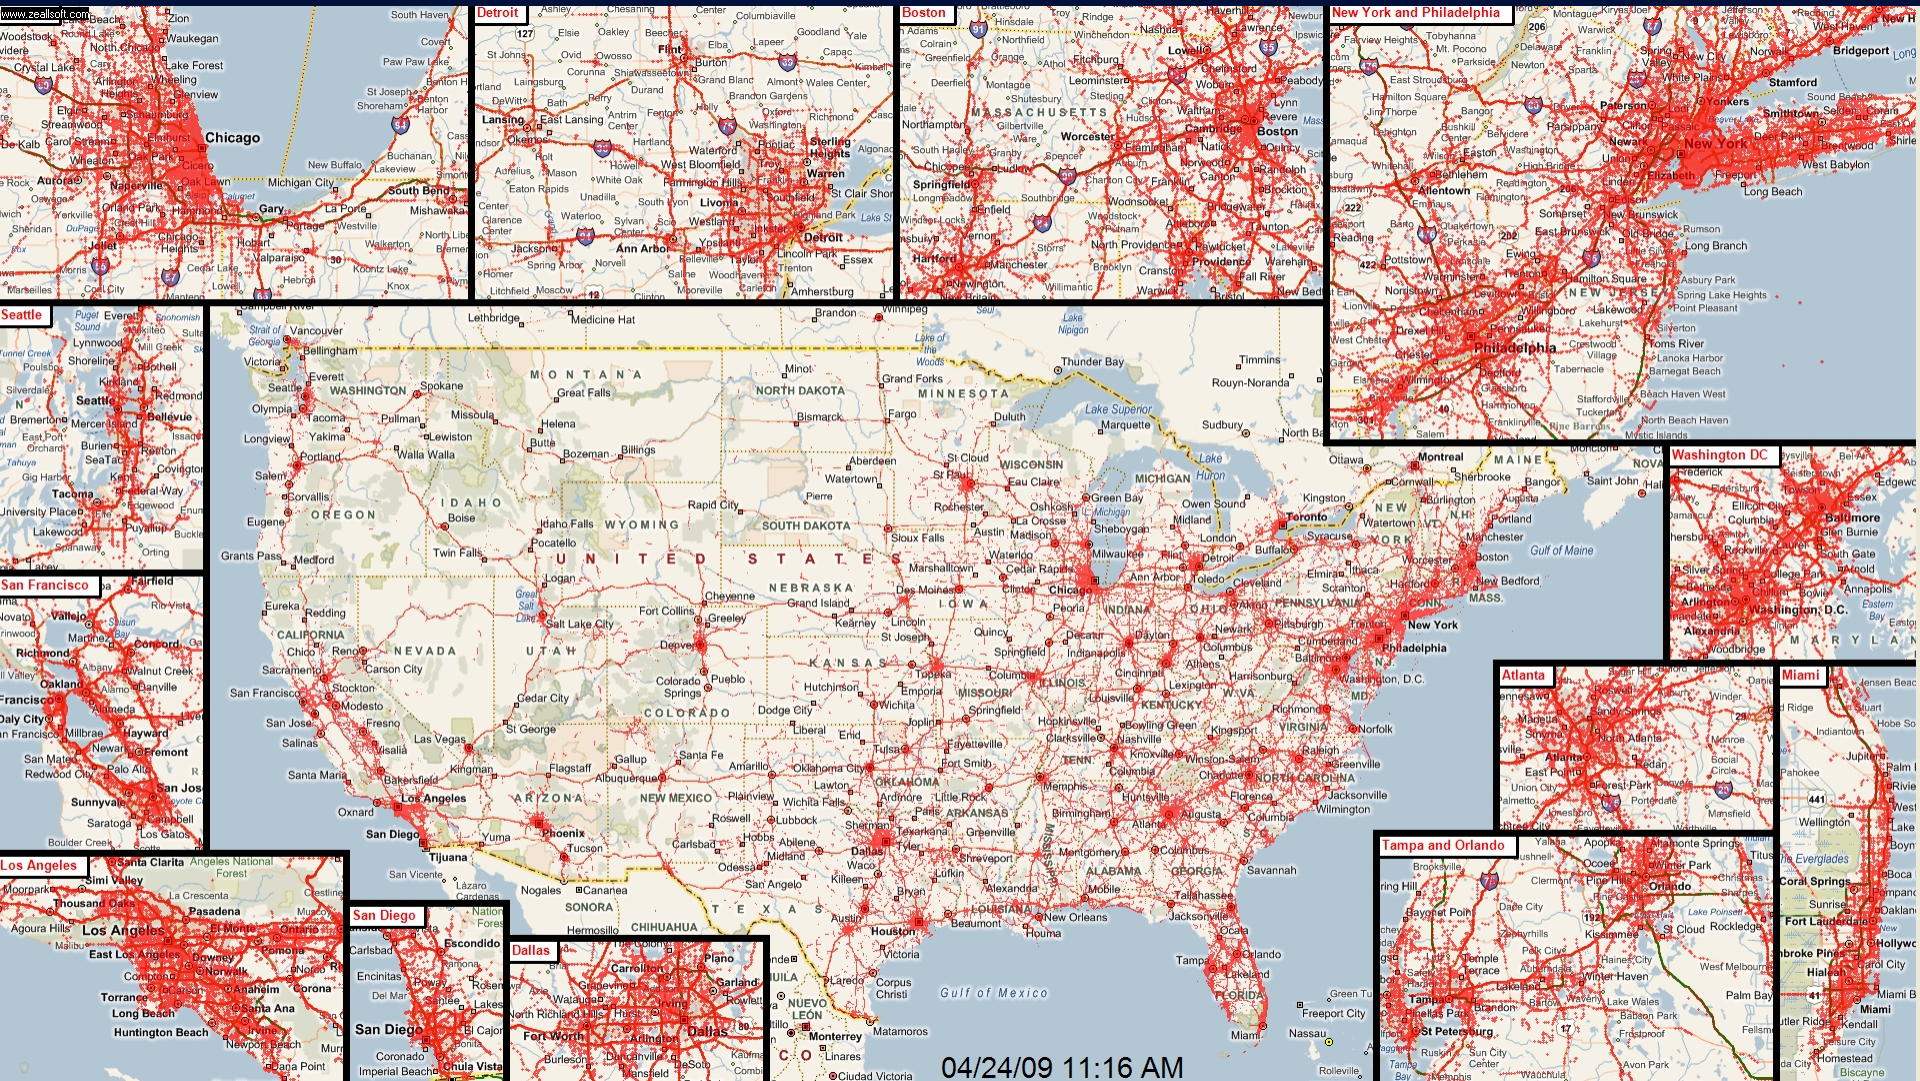

→ *A more effective choice long-term?*

→ *The ideal approach combines government **and** individual empowerment*

# Crowd-Sourcing Travel Information

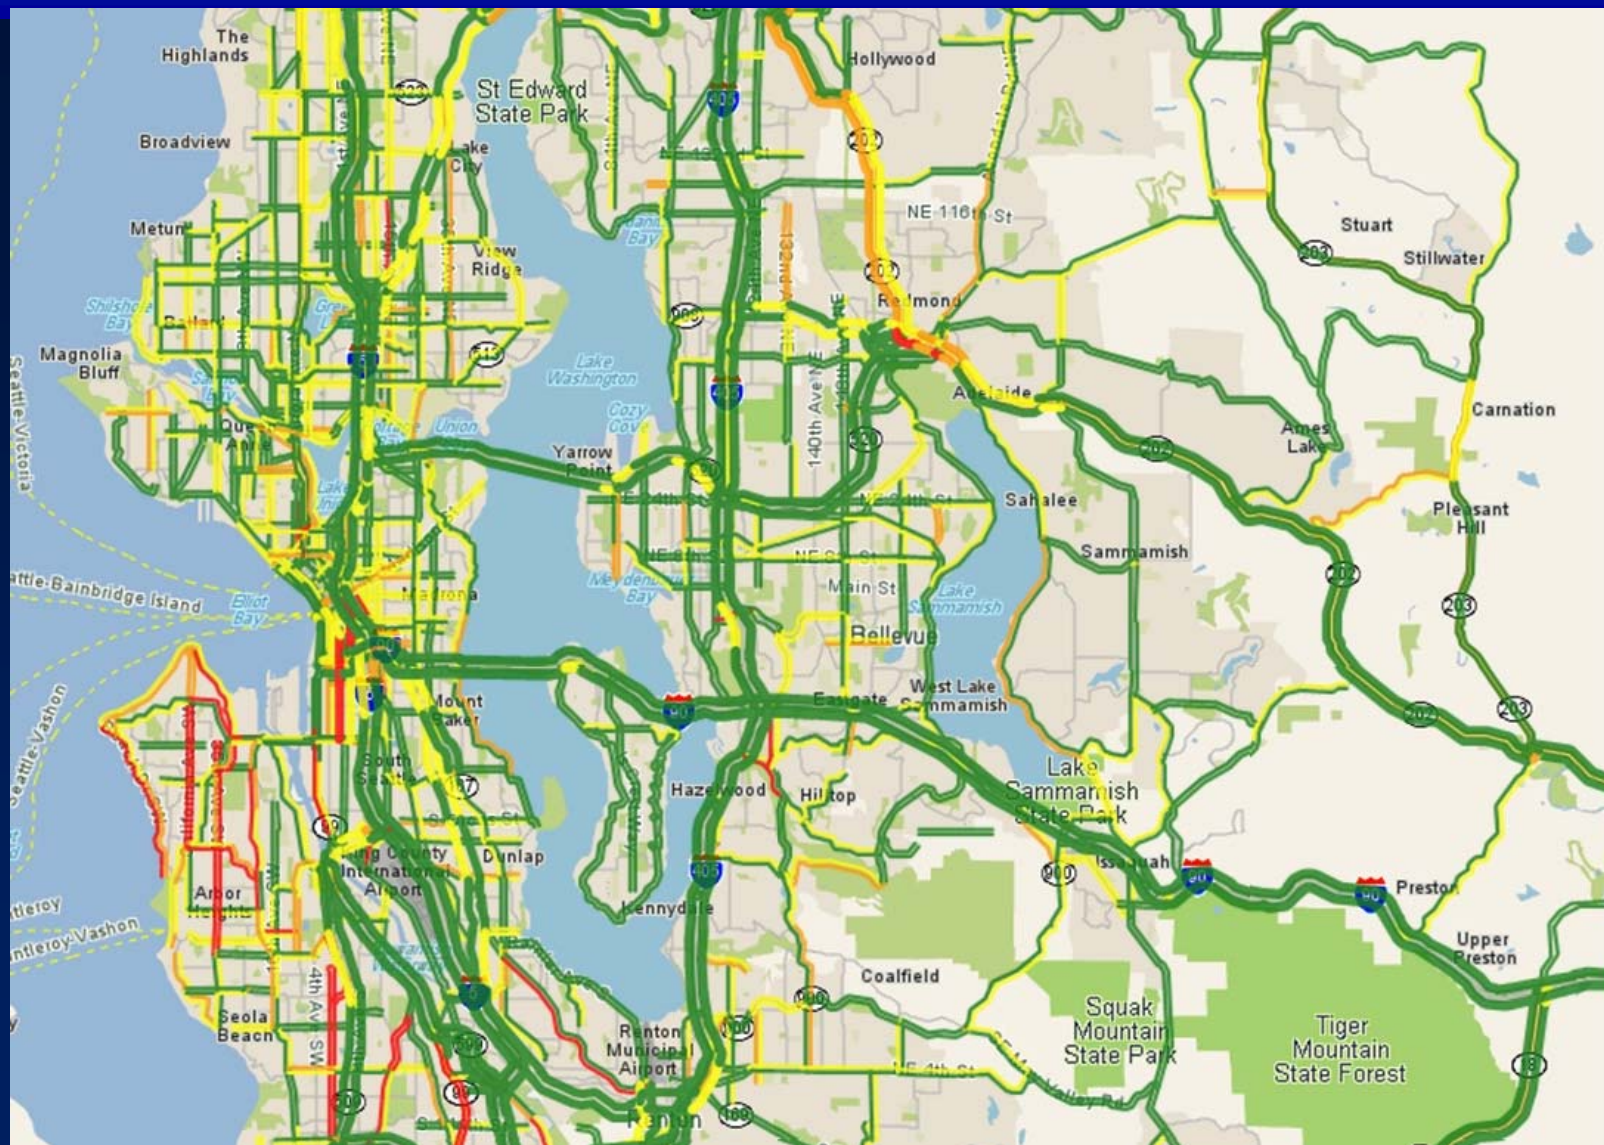

More than 1.3M users across the country reporting data every minute

# INRIX Traffic Coverage

## Seattle

# Key Crowdsourcing Drivers

**Exponential growth of GPS-enabled mobile and embedded devices in the market**

**Massive shift to 2-way device connectivity and phone integration with the car**

**Significant leaps in software technology innovations and applications**

**Willingness of consumers and businesses to contribute and/or derive benefits from crowdsourcing**

# “Network Effect” of Crowd-Sourcing

## “Network Effect” enables consumer choice

→ Tens of millions of individuals ‘contribute to’ and ‘benefit’ from the information network

- **Significantly broader traffic coverage**
  - Road segments → Road networks
  - City → Country → Pan-Europe
- **Higher quality information**
  - Incident → Flow
  - Real-time → Predictive
  - Disconnected → Connected
  - “Dumb” Routing → Time-Sensitive/Traffic-aware routing
- **Improved safety**
  - Automatic crash response
  - Emergency routing
  - User generated incidents
