

Audience

- Over 200 attendees from Washington, Oregon, British Columbia and other jurisdictions
- About 40% are fleet managers or decision makers
- About 1/4 are technology providers
- Special sessions on natural gas for trucking and delivery fleets

Green Transportation Summit

June 27, 2012 | Seattle, WA

The Green Transportation Summit will focus on alternative fuel vehicle implementation opportunities, obstacles, and how to overcome them. There will be a special focus on natural gas, as well as technologies ranging from hybrids, electric, autogas (propane), biofuels and emerging technologies.

Featured Speaker: John Kargul, the nation's expert on hydraulic hybrids

The "Hydraulic Hybrids 101" session will demystify the technology behind the hydraulic hybrids that are finally emerging in the commercial truck market. Being part of EPA's Clean Automotive Technology Program, John Kargul has a unique understanding and perspective of all commercial hybrid systems and their benefits. He will present an overview of the different types of hydraulic hybrids that are currently available in commercial medium and heavy trucks, as well as discuss what he sees coming in the future. Attendees will walk away with a concrete understanding of how series hydraulic hybrid systems achieve 2 to 4 times the mpg improvement over other types of hybrids.

Also featured:

- Learn about the latest diesel-to-natural gas conversions and re-power options.
- Interact directly with financing and leasing agents familiar with alternative fuel vehicles
- Hear from local leaders on what they see emerging in our Ports and transportation corridors
