NEXT GENERATION RIDESHARE ONLINE CONCEPT?

"SMART POOLING"

- Calendar integration
 - Automatically find and accept best match based on any given schedule
 - Allows for commute out and back to have different riders
 - Automatic rescheduling and notification in the event of a plan change
- Smart Routing
 - No need to drive up to everyone's driveway (meet on the corner)
 - Dynamic estimation and notification of vehicle arrival time
 - Leave the house and find out who you are picking up afterwards
- Preferences
 - Interest matching
 - Driver/passenger feedback

RIDESHARING

Team Phoenix
New Zealand

A screenshot of a simulation software interface. The main window shows a map of Christchurch, New Zealand, with numerous red bus icons and blue car icons scattered across the city streets. The map includes labels for "NEW ZEALAND", "North Hagley Park", and "Christchurch". On the right side, there is a control panel with a "Statistics" tab. The control panel includes a "Licensed for development only" notice, an "Input" section with a "Step" button, and several input fields: "Passengers / day" (set to 50000), "Taxibuses available" (set to 375), "Taxibus capacity" (set to 4), and "Hours until steady state" (set to 1000). A checkbox labeled "Distribute buses randomly" is checked. At the bottom of the interface, there are controls for "Show Routes", "Zoom", "Speed", and a "Time: 12:21 pm" display.

U.K. drivers share the load

To cope with high fuel prices, some European companies have begun sharing space on their trucks, sometimes with their fiercest rivals. Stephen Beard has the story.
